

CATTLE CRUSH KPB 1

DEVICE DESCRIPTION

Cattle crush KPB 1 is especially designed for cows with long horns as it possesses a front gate consisting of dual yokes with a chain, which open sideways, between which cow's head is blocked. It has a heavy duty main frame and anti-slippery steel tread plate floor. All parts of our crush are hot dipped galvanized for maximum corrosion resistance and long life durability. The cattle crush is designed to allow complete and safe access to the animal's flanks for all tasks, leaving the animal immobile at the same time. It possesses foot trimming equipment including adjustable double belly support straps, a worm gear by means of which a cow is lifted from the ground and front and back winches. These winches possess German made ratchet cranks which enable stable, rigid and safe hoof trimming positions. Standard cattle crush KPB 1 has one front winch, which can be unscrewed to move it to other side or it can be equipped with two adjustable and moveable to the sides front winches at extra cost. The back gate is equipped with a specially designed dung plate to assist in a clean work environment. Our crush can be easily moved using a back tractor linkage or pallet forks from the side. It can also be easily transportable manually thanks to a set of wheels, an axis and a drawbar, which can be purchased at extra cost.
