

# **CATTLE CRUSH KPB 1M**

## **DEVICE DESCRIPTION**

Cattle crush KPB 1M is specially designed for beef cows with long horns as it possesses a front gate consisting of dual yokes with a chain, which open sideways, between which cow's head is blocked. It is a crush, which is mainly designed for carrying out various veterinary procedures. Its sides are additionally protected by welded wire mesh. All parts of our crush are hot dipped galvanized for maximum corrosion resistance and long life durability. The cattle crush is designed to allow complete and safe access to the animal's flanks for all tasks, leaving the animal immobile at the same time. The crush possesses adjustable double belly support straps, a worm gear by means of which cow is lifted from the ground. The crush KPB 1M is so designed that it can also function as a hoof trimming device, as it can have front leg winches (either one or two) fixed at extra cost. The back gate can also be changed into the one which allows hoof trimming procedures (extra cost). The back gate has a dung plate to assist in a clean work environment. Our crush can be easily moved using back tractor linkage or pallet forks from the side. It can also be easily transportable manually thanks to a set of wheels, an axis and a drawbar, which can be purchased at extra cost.
