

# CATTLE CRUSH KPB 3P

## DEVICE DESCRIPTION

Our cattle crush KPB 3P is a mobile crush, which can be towed by a car, as it functions as a trailer. It has a rear entrance gate closed by a rump bar and a unique quick adjust, self-closing front gate. This allows easy adjustment of the animal's neck in between two gates. It has a heavy duty main frame and anti-slippery steel tread plate floor. All parts of our crushes are hot dipped galvanized for maximum corrosion resistance and long life durability. The cattle crush is designed to allow complete and safe access to the animal's flanks for all tasks, leaving the animal immobile at the same time. It possesses foot trimming equipment including adjustable, double belly band support straps along with a worm gear and a special element enabling hind groin lift by means of which the whole animal is lifted up to lose her balance. Additionally, the crush KPB 3P possesses two new front, adjustable and moveable to the sides winches by means of which cow's legs are lifted. These winches possess German made ratchet cranks which enable stable, rigid and safe hoof trimming positions. The back gate is equipped with a specially designed dung plate to assist in a clean work environment. It has a set of wheels, an axis, a coupling and a jockey wheel. It is equipped with necessary cabling and rear lights as well as four mount swivel trailer jacks and two entrance platforms.
