

CATTLE CRUSH KPB 4P

DEVICE DESCRIPTION

Cattle crush KPB 4P is specially designed for tie stalls, it is ideal **for cows in cattle headlocks**. Its light structure on wheels makes it easy to maneuver the crush from one cow stall to another to carry out all the necessary hoof trimming tasks. All parts of our crush are hot dipped galvanized for maximum corrosion resistance and long life durability. The cattle crush is so designed to allow complete and safe access to the animal's flanks for all tasks, leaving the animal immobile at the same time. It possesses foot trimming equipment including adjustable double belly and inguinal support straps (especially destined for calving cows and cows with large milk veins), a worm gear by means of which cow is lifted from the ground and front and back winches. These winches possess German made ratchet cranks which enable stable, rigid and safe hoof trimming positions. Standard cattle crush KPB 4P has one front winch, which can be unscrewed to move it to other side or it can be equipped with two front winches at extra cost. The back gate is equipped with a specially designed dung plate to assist in a clean work environment. Our crush can be easily moved using back tractor linkage. It can also be easily transportable manually
